

***PLEASE CHECK WITH YOUR PRIMARY CARE PHYSICIAN PRIOR TO STOPPING ANY MEDICATIONS.** It may not be safe for some patients to stop some of these medications abruptly on their own. All other medications not listed should be fine to continue prior to skin testing. We have not been able to include all brand names- please try to find the generic names of the current medications you use when looking through this list.

If you suffer from an allergic hive and or swelling problem, please do not stop any antihistamines prior to your initial scheduled visit with our office. We will discuss your testing options during your scheduled appointment with our office. We do not want your hive and or swelling problem to worsen by discontinuing your antihistamine.

Do not use these medications 7 days prior to testing*	
ACTIFED	LORATIDINE
ADVIL PM	LORAZEPAM (ATIVAN)
AEROKIDS	LUDIOMIL
